

Meeting Manager PRO

AI Software Solution for the Direct Mail Industry

Overview

Over the past three years, I've worked directly inside a niche segment of the financial services industry where advisors host dinner seminars to acquire new clients. This industry is large, proven, and profitable—but the process has remained largely unchanged for over 20 years.

Today, it is inefficient, fragmented, and heavily dependent on outdated systems and third-party vendors.

I have developed a solution called **MeetingManagerPro**—a software platform designed to modernize and streamline this entire process using AI and data intelligence.

The Problem

Financial advisors currently rely on a patchwork system involving:

- Print/mail vendors
- Third-party data providers
- Call centers
- Manual planning of locations and timing
- Disconnected reporting systems

This results in:

- High costs (often \$8,000–\$15,000 per campaign)
- Low response rates (~0.6%–1%)
- Little to no optimization from past campaigns
- Lost data and missed opportunities

Despite this, the model still works—which means improving it even modestly creates significant upside.

The Solution

MeetingManagerPro is an AI-powered platform that:

- Automates where and when seminars should be held using mapping intelligence and saving advisors hours of time planning each mailing
- Integrates targeting, mailing, and response tracking into one system bringing together data points that have previously been kept apart.
- Captures and analyzes full campaign performance—from invite to sale
- Continuously improves results using AI-driven recommendations

Instead of advisors relying on a myriad of multiple vendors, they control their own data and decision-making in-house.

**“Today’s seminar marketing is fragmented and inefficient.
MeetingManagerPro turns it into a unified, data-driven system.”**

Advisor Decides to Run Seminar

- No data-driven location insight

Manual Venue Selection

- Time-Consuming & Guesswork
- Defaults to familiar, overused venues
- No audience density insight

Dependent on Mail House

- Generic mailers
- Basic targeting (age, income, IPA, simple map radius)

Fragmented Vendors

- Data Provider
- Call center
- Print/mail vendor

Mailers Printed & Sent

Limited response tracking

- QR codes & Call Center
- Limited Tracking

Seminar Held

No feedback Loop/No Learning

- Sales Data not Integrated
- No optimization
- Process repeated blindly

**OLD
FRAGMENTED,
MANUAL METHOD**

**NEW EFFICIENT
SOFTWARE-
DRIVEN,
AI-OPTIMIZED
METHOD**

Advisor defines Goal

- Advisor defines goals in plain language
- Target Audience, Attendance and location

AI Generates Optimized Plan

- Best Venues
- Drive-time targeting (not just radius)
- Optimal dates/times
- Mail Volume

Advisor adjusts & approves

- Simple conversational prompts

One-Click Campaign Launch

- Data + Mailer sent to print

Fully Integrated Response System

- AI receptionist
- QR landing pages
- Automated confirmations

Full Funnel Tracking (Start > Sale)

- Attendance
- Appointments
- Sales

AI Continuously Optimizes

- Improves targeting
- Refines messaging
- Increases conversions

Same Budget > More Attendees > More Appointments > More Revenue > Compounding Intelligence

Why This Works

This is not a new concept—it's a **better system for an already proven model**.

Key advantages:

- I have direct, real-world experience in this exact industry
- I understand what actually converts (not just theoretical data)
- I've already built a working foundation of the software which makes improvements at every level of the process
- I've initiated conversations with industry contacts and partners
- **Google's AI Futures Fund has already expressed interest** in the concept. At the VC level, they would put in \$1-2 Million... which I expect would happen later this year
- IF Google doesn't step up, there are more than a half dozen other venture firms that are heavily into AI-Driven projects

Google is very interested because it gives them direct access to data they haven't been able to obtain in the past. This is a case of applying modern intelligence to an existing revenue engine.

Market Opportunity

Thousands of financial advisors and insurance professionals use seminar marketing every year. It's a multi-billion dollar industry. Even modest adoption can produce:

- Recurring SaaS revenue
 - Campaign-based revenue streams
 - Strategic partnerships with FMOs and marketing organizations
- This is a scalable, national opportunity with expansion potential into adjacent industries that could result in 10's of millions in annual revenue driven mostly by this software.

Funding Opportunity

I am opening a **friends and family investment round** to accelerate development and early market entry. I'm only offering investment in 10% total at this time.

Buy-Ins Available (as of 4/17/26)

\$2,500	\$2,500	\$2,500	\$2,500	\$2,500
RESERVED	RESERVED			

\$2,500	\$2,500	\$2,500	\$2,500	\$2,500
---------	---------	---------	---------	---------

Structure (Simple and Transparent)

- Current estimated valuation: **\$250,000**
- Example:
 - \$2,500 investment = **1% ownership**
 - \$5,000 investment = **2% ownership**
 - \$12,500 investment = **5% ownership**

Future funding rounds (including potential venture capital) would be at higher valuations.

Potential Return & Growth Path

MeetingManagerPro is designed to improve an existing, proven marketing model used nationwide by financial advisors.

Because this is an early-stage opportunity, returns are tied to the company's growth rather than a fixed payout.

There are three primary paths to investor return:

1. Future Investment Rounds

As the platform gains traction and revenue, future funding rounds may occur at higher valuations. Early investors benefit from discounted conversion into equity at those higher valuations.

2. Strategic Acquisition

Companies in the financial marketing, data, and fintech space regularly acquire platforms that demonstrate scalable customer acquisition systems. MeetingManagerPro is positioned to become such a system.

3. Long-Term Profitability

If the platform generates consistent recurring revenue, investor returns may come through profit distributions over time.

Current Timing

Platform has been developed over the last 3 months (from over 2 years of street experience in the field) with initial launch planned for the next 30 days (by end of May, 2026). First two clients are currently being negotiated with. All the needed vendors have been brought onboard (Printer, Data Source, Mapping, Call Center).

By the end of 2026, there will be enough revenue and data to reapply to the Google AI fund (which they have already requested we do asap).

Market Validation

Initial validation includes:

- Direct industry experience and proven demand for seminar marketing
- Early development of the platform
- Positive response from Google's AI Futures Fund, indicating alignment with current AI-driven opportunities

Why I'm Sharing This With You

This is not a mass solicitation.

I'm offering this to a small group of people I know personally so that:

- Those interested have an opportunity to participate early
- Those not interested can at least say they had the chance

There is no pressure or expectation—only access.

Closing

This will significantly improve an established industry and build a scalable, valuable company.

And... there are many "outs" down the line.

- Being purchased by a large FMO for exclusivity and the data moat it creates.
- Being bought out by the nationwide printer I have partnered with to secure their business.
- Being bought out by an existing archaic print house that wants to jump ahead quickly.
- Being funded or bought out by Google for the unique data it creates
- Being funded by another VC entity that wants to support AI development
- and so on...

If you'd like to discuss further (upside, potential competition, etc.) or see what's been built so far, I'd be happy to walk you through it.
