

Steps to set up Multi-Factor Login on Prisma SFTP Web Portal

The Prisma SFTP site will ask you to set up your login account in any TOTP compliant authentication App. Google Authenticator, Microsoft Authenticator, Authy etc.... are common TOTP Apps that can be downloaded from the Google Play Store or Apple App Store. Any of them will work with the Prisma SFTP site. You will need one of these Apps in order to complete the Multi-Factor Login setup. Once you have the TOTP App installed on your smartphone you can move on to the next step.

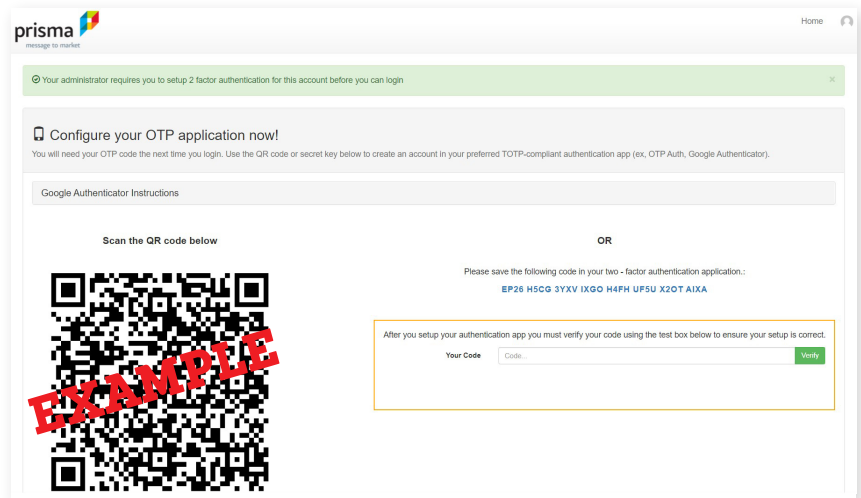

1. Go to Prisma SFTP website at <https://secure.prismagraphic.com>.
2. Login with your **Username** and **Password**, be sure to check the reCAPTCHA box and complete the reCAPTCHA process if asked.

Sign in

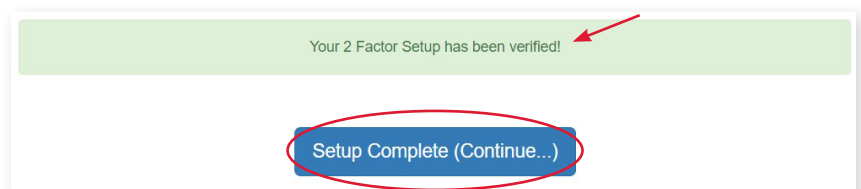

3. The Prisma SFTP site will present a QR code that can be scanned by the TOTP App that you installed at the beginning of this document. Scan the code and it will set an account into the App labeled as "Cerberus(<Username>)."

4. Once you have scanned the QR code the App will set up an account and you will see a rolling 6-digit code next to that account. Enter this code into the "Your Code" box and click "Verify." This will verify that the App and code were set up correctly.

5. You will then see that the code was verified successfully and can continue to log into your account.

6. From this point forward, when logging into the Prisma SFTP site you will see an entry line for your current code after the main sign in page and before you are given access to your account. Enter your code in the box and click sign in to complete the sign in process.
